

FIGURE 1. Schematic diagram illustrating the underlying physical mechanism.

FIGURE 2. In this geometry, no electrostatic or magnetostatic filtering is employed, but the electron energy spread may be reduced by use of multiple laser beams or a density discontinuity to inject electrons at a prescribed phase.

FIGURE 3. DQ configuration. A sector magnet is used in conjunction with a quadrupole to reduce the energy spread of the electron beam.

FIGURE 4. QQQD configuration. In this case, the energy spread of the electron beam is reduced and the electron source is imaged to the interaction region by use of three quadrupole magnets followed by a dipole.

FIGURE 5. DQDQQ configuration. In this case, the energy spread of the electron beam is reduced and the electron source is imaged to the interaction region by use of a quadrupole magnet between two dipoles followed by two more quadrupoles.

Title: ULTRA-SHORT WAVELENGTH X-RAY SYSTEM

6/13

- 71 electron pump laser
- 72 harmonics pump laser
- 73 amplifier pump laser
- 8 barapolic mirror
- 9 parabolic mirror
- 10 gas jet
- 51 dipole magnet
- 81 parabolic mirror
- 22 gas jet
- 18 quadrupole magnet l
- 19 quadrupole magnet II
- 20 quadrupole magnet III

FIGURE 6. Oscillator-amplifier configuration. The components are the same as in Fig. 4, but another synchronized laser beam has been added, a harmonics pump laser beam (12), which is split off with a beam splitter and independently delayed by a delay line in similar fashion to the amplifier pump beam. (The optics used to split the beam and delay it, along with those used to do the same for the other two laser beams from Fig. 4 are not shown.) This beam is focused to a gas jet (22) by a parabolic mirror (31) with a hole in it, through which the electron beam passes. The radiation from the gas jet seeds the amplifier. The same QQQD configuration of Fig. 4 is used to reduce the energy spread of the electrons, but only the dipole magnet (51) is shown.

FIGURE 7. Oscillator-amplifier configuration (enlarged). This figure shows an enlarged version of final optics from Fig. 6.
